QuTiP target_tol vs LiQuID adaptive stopping
$N_{QuTiP} = N_{LiQuID}$
Both converge normally
QuTiP false-converged
QuTiP did not converge (capped at N_{max})
C2
C3
C4
F3
F1
F2
F1–F3: false convergence | C1–C4: capped, did not converge (see Table 8 for values)
N at stop (QuTiP, target_tol jackknife)
N_{adapt} (LiQuID, Welford RelSEM)
